

TPM New Calculation Update

Do you ever have the requirement of averaging or adding a group of tasks, but you can ignore the lowest result for each student? For example, the class has done 4 quizzes, but you want to average only the three best results for each student. There is a free Teacher's Personal Markbook update that adds the new Average highest tasks and Combine highest tasks calculations to the Edit|Calculations command. You can get from the Updates section of the Members menu.
